**DECLARATION OF GARY A. SNYDER UNDER 37 C.F.R. §1.132**

1. I, Gary A. Snyder, am the sole inventor of the above-referenced patent application. I have reviewed the application and in particular, the examples included within the specification.

2. During the prosecution of the present application, it was discovered that the numerical values of the starting volumes of the methyl anthranilate standard concentrations and thus, the resulting final percentages of methyl anthranilate admixtures in the various examples were incorrect. For example, in Example 1 in the patent application, the recited volume of standard, 26.4% methyl anthranilate concentrate was 1 fluid ounce instead of 2.56 fluid ounces in a gallon of water. This resulted in a methyl anthranilate admixture to be reported as a 0.205% methyl anthranilate admixture instead of a 2 % admixture. This error and similar errors that are present throughout the Example section of the pending application were unintentional.

3. At the time of the invention it was known to me that the methyl anthranilate admixtures tested were between 1 % and 6%. During the preparation of the patent application, wrong starting volumes of the standard 26.4% methyl anthranilate concentrate were included within the application which resulted in the final percentages of the various methyl anthranilate admixtures to be incorrect.
